002553

Booklet Serial No.

Time Allowed: Two Hours

Test Booklet Series

Maximum Marks: 100

## **TEST BOOKLET - 2022**

# NON ENGINEERING MEDICAL LAB TECHNOLOGY LECTURER II

(16)

INSTRUCTIONS

- 1. IMMEDIATELY AFTER THE COMMENCEMENT OF THE EXAMINATION, YOU SHOULD CHECK THAT THIS TEST BOOKLET DOES **NOT** HAVE ANY UNPRINTED OR TORN OR MISSING PAGES OR ITEMS ETC. IF SO, GET IT REPLACED BY A COMPLETE TEST BOOKLET.
- 2. Please note that it is the candidate's responsibility to encode and fill in the Roll Number and Test Booklet Series Code A, B, C or D carefully and without any omission or discrepancy at the appropriate places in the OMR Response Sheet. Any omission/discrepany will render the Response Sheet liable for rejection.
- 3. You have to enter your Roll Number on the Test Booklet in the Box provided alongside. **DO NOT** write anything else on the Test Booklet.
- 4. This Test booklet contains 100 items (questions). Each item comprises of four responses (answers). You will select the response which you want to mark on the Response sheet. In case you feel that there is more than one correct response, mark the response which you consider the best. In any case, choose ONLY ONE response for each item.
- 5. You have to mark all your responses ONLY on the separate Response Sheet provided. See directions in the Response Sheet.
- 6. All items carry equal marks.
- 7. Before you proceed to mark in the Response sheet the response to various items in the Test Booklet you have to fill in some particulars in the Response Sheet as per instructions sent to you with your Admission Certificate.
- 8. After you have completed filling in all your responses on the Response Sheet and the examination has concluded, you should hand over to the Invigilator *only the Response Sheet*. You are permitted to take away with you the Test Booklet and Candidate's Copy of the Response Sheet.
- 9. Sheets for rough work are appended in the Test Booklet at the end.
- 10. Penalty for wrong answers:
  THERE WILL BE PENALTY FOR WRONG ANSWERS MARKED BY THE CANDIDATE.
  - (i) There are four alternatives for the answer to every question. For each question for which a wrong answer has been given by the candidate, 0.25 of the marks assigned to that question will be deducted as penalty.
  - (ii) It a candidate gives more than one answer, it will be treated as a wrong answer even if one of the given answers happens to be correct and there will be same penalty as above for that question.
  - (iii) If a question is left blank, i.e., no answer is given by the candidate, there will be no **penalty** for that question.

DO NOT OPEN THIS TEST BOOKLET UNTIL YOU ARE TOLD TO DO SO

16(A)

(2)

1.	Tota	l WBC and neutrophil count of 3x10 <sup>4</sup> /mm <sup>3</sup> are normal in
	A)	a 3 days-old healthy baby
	B)	a 13 years-old healthy teenager
	C)	a 30 years-old healthy adult
	D)	an individual with a high Cr level in blood
2.	Whi	ch of the following is true regarding the blood cell population?
71	A)	It changes only at a frequency lesser than 1.157x10 <sup>-5</sup> s, in general
	B)	It differs only due to physiological abnormalities
	C)	It is oscillating with a rhythm
	D)	Sleep deprivation does not affect the granulocyte population conspicuously
3.	Hea	Ithy neonates do not have
	A)	a lower platelet count
	B)	a lower Hct value in capillary blood
	C)	a lower Hb and WBC count
	D)	a lower MCV value
4.	Whi	ich of the following types of hemoglobin is not found in healthy adults?
	A)	
	B)	$\mathbf{A}_{\mathbf{i}}^{\prime}$
	C)	M
	D)	$A_2$
5.		thalassemia patients, there is an eventual development of elevated body iron load. ich of the following is not true regarding thalassemia?
	A)	There is an ineffective erythropoiesis
	B)	There is an increased absorption of dietary iron
	C)	Hypoxia-dependent hepcidin down-regulation may take place
	D)	Patients are prescribed to take iron supplements
6.	Due	e to RBC lysis, which of the following occurs
	A)	Iron cation gets reduced and heme is released
	B)	Redox-active irons are down-regulated
	C)	Heme remains bound to RBC
	D)	Redox-active iron promotes foam cell formation
77 -		

- 7. WBC cannot be produced by
  - A) Primitive hematopoiesis
  - B) Liver and spleen
  - C) Both (A) and (B)
  - D) Bone marrow and lymph nodes
- 8. Which of the following pathways occur in general?
  - A)  $HSC \rightarrow Myeloblast \rightarrow \rightarrow \rightarrow \rightarrow RBC$
  - B)  $HSC \rightarrow Myeloblast \rightarrow \rightarrow \rightarrow Macrophage$
  - C)  $HSC \rightarrow Myeloblast \rightarrow \rightarrow \rightarrow Platelets$
  - D)  $HSC \rightarrow CMP \rightarrow \rightarrow \rightarrow \rightarrow Neutrophils$
- 9. Which of the following is found to occur generally for maximum O<sub>2</sub>-carrying capacity?
  - A) Hb is kept in an oxidizing environment
  - B) Hb is kept in reducing environment
  - C) Catalase and glutathione create an oxidizing environment
  - D) Both (A) and (C)
- 10. Which of the following blood cells are bone marrow-derived leukocytes and one of the first immune cells to respond to bacteria/viruses, are phagocytic, release cytotoxic substances from their intracellular granules, and may contribute to more than 35% total WBC count in a general absence of physiological abnormality?
  - A) Neutrophils
  - B) Monocytes
  - C) Basophils
  - D) B cells
- 11. Hexose monophosphate shunt is a pathway that produces energy-rich molecules. Which of the following is false?
  - A) RBC uses HMP shunt Monocytes
  - B) In general, RBCs cannot use HMP shunt
  - C) In patients with glucose-6-phosphate-dehydrogenase deficiency, Heinz bodies are produced eventually
  - D) Degmacytes are seen in a peripheral smear of patients deficient in a certain metabolic enzyme, where the disorder is sex-linked

12. Assertion (X): The deficiency of glucose-6-phosphate-dehydrogenase enzyme (G6PH) is an X- linked recessive disorder, common in Africans. This disorder evokes some resistance to malaria.

**Reason (Y):** Patients with G6PH deficiency have only a reduced form of glutathione in RBCs.

- A) Statement X is correct and statement Y rightly explains statement X
- B) Statement X is correct but not Y
- C) Statements X and Y are incorrect
- D) Statement X is incorrect but not Y
- 13. Which of the following is best true?
  - A) Antibodies are secreted for cell-mediated immunity by lymphocytes
  - B) Plasmatocytes produce all lymphocytes present in the blood.
  - C) Antibodies are secreted by plasmatocytes that are further made from activated B- cells
  - Certain antibodies are readily available in blood as they are produced as precautionary machinery.
- 14. Which of the following couple has components that are thrombogenic and anti-thrombogenic, respectively? [VWF-Von Willebrand Factor]
  - A) Platelets, VWF
  - B) Collagen, Tissue Factor
  - C) Collagen, Tissue plasminogen activator
  - D) Tissue plasminogen activator, Thrombomodulin
- 15. The staining technique used to stain the metachromatic granules of Corynebacterium is
  - A) Giemsa stain
  - B) Alberts stain
  - C) Acid-fast staining
  - D) Both A and B
- 16. In a fluorescent microscope, the objective lens is made of
  - A) Glass
  - B) Plastic
  - C) Polythene
  - D) Quartz

17.	The phagocytic theory was proposed by	
-----	---------------------------------------	--

- A) Rudolf Virchow
- B) Elie Metchnikoff
- C) Behring
- D) Louis Pasteur

# 18. Which one of the following is about herpes viruses?

- A) Icosahedral, with envelope, ds DNA
- B) Polyhedral with envelope, ds DNA
- C) RNA, helical with envelope
- D) ds DNA, brick shape

## 19. Alginic acids and their salts are obtained from the wall of

- A) Red algae
- B) Brown algae
- C) Green algae
- D) Red and brown algae

## 20. Toxic products in phagolysosomes are

- A) H<sub>2</sub>SO<sub>4</sub>
- B) Singlet O,
- C) Superoxide radicals
- D) All of these

## 21. Opsonin is the

- A) Cell wall component
- B) Plasma component
- C) Serum component
- D) Cytoplasm component

## 22. During AIDS, HIV infects

- A) CD<sub>3</sub> lymphocytes
- B) CD<sub>4</sub> lymphocytes
- C) CD, lymphocytes
- D) B lymphocytes

23.	Tecl	noic acid is	anner jangungan kadi Salat				
	A)	Found in the walls of Gram-positive bacteria					
	B)	Provide receptors for phages					
	C)	Make up the outer wall of Gram-negative bacteria	(杜) (				
	D)	Influence the permeability of the membrane					
24.	Elek	c's gel diffusion test is used for the detection of	eura ocașim un X. s. de				
	A)	Tetani toxin					
	B)	Cholera toxin					
	C)	Diphtheria toxin					
	D)	Toxoid					
25.	Spo	res are killed by					
	A)	70% alcohol					
	B)	Glutaraldehyde	A STREET OF STREET				
	C)	Autoclaving					
	D)	Both B and C	assigned the search				
26.		tures are prepared by penetrating the inoculation loop lium, they are	with suspension into the				
	A)	Stock culture					
	B)	Stab culture					
	C)	Both A and B					
	D)	Sub-culture					
27.	Shigella was first isolated by						
	A)	Shiga					
	B)	Schmitz					
	C)	Sonnie					
	D)	Robert Koch					
28.	Salt	agar is used for					
	A)	Streptococcus					
	B)	Staphylococcus					

C)

D)

Vibrio

Shigella

A) Fats B) Amino acids C) Polysaccharides D) Polypeptides  1. The most important vitamin for the growth of bacteria is A) B-complex B) Vitamin A C) Vitamin D D) Vitamin C  2. Pasteur effect is A) Change from aerobic to anaerobic B) Providing oxygen to aerobically respiring structures C) Rapid utilization of ATP D) Non-synthesis of ATP  3. Agglutination reaction is strongest with the immunoglobulin A) IgM B) IgG C) IgA D) IgD  4. In the ELISA technique, the antibodies are labeled by A) Acridine orange B) Alkaline phosphate C) Neutral red D) Bromothymol blue		C)	Both A and B
A) Fats B) Amino acids C) Polysaccharides D) Polypeptides  1. The most important vitamin for the growth of bacteria is A) B-complex B) Vitamin A C) Vitamin D D) Vitamin C  2. Pasteur effect is A) Change from aerobic to anaerobic B) Providing oxygen to aerobically respiring structures C) Rapid utilization of ATP D) Non-synthesis of ATP  3. Agglutination reaction is strongest with the immunoglobulin A) IgM B) IgG C) IgA D) IgD  4. In the ELISA technique, the antibodies are labeled by A) Acridine orange B) Alkaline phosphate C) Neutral red D) Bromothymol blue		D)	Polypeptides
B) Amino acids C) Polysaccharides D) Polypeptides  1. The most important vitamin for the growth of bacteria is A) B-complex B) Vitamin A C) Vitamin D D) Vitamin C  2. Pasteur effect is A) Change from aerobic to anaerobic B) Providing oxygen to aerobically respiring structures C) Rapid utilization of ATP D) Non-synthesis of ATP  3. Agglutination reaction is strongest with the immunoglobulin A) IgM B) IgG C) IgA D) IgD  4. In the ELISA technique, the antibodies are labeled by A) Acridine orange B) Alkaline phosphate C) Neutral red D) Bromothymol blue	30.	The	major constituents in agar are
C) Polysaccharides D) Polypeptides  1. The most important vitamin for the growth of bacteria is A) B-complex B) Vitamin A C) Vitamin D D) Vitamin C  2. Pasteur effect is A) Change from aerobic to anaerobic B) Providing oxygen to aerobically respiring structures C) Rapid utilization of ATP D) Non-synthesis of ATP  3. Agglutination reaction is strongest with the immunoglobulin A) IgM B) IgG C) IgA D) IgD  4. In the ELISA technique, the antibodies are labeled by A) Acridine orange B) Alkaline phosphate C) Neutral red D) Bromothymol blue		A)	Fats

A) Change from aerobic to anaerobic B) Providing oxygen to aerobically respiring structures C) Rapid utilization of ATP D) Non-synthesis of ATP  3. Agglutination reaction is strongest with the immunoglobulin A) IgM B) IgG C) IgA D) IgD  4. In the ELISA technique, the antibodies are labeled by A) Acridine orange B) Alkaline phosphate C) Neutral red D) Bromothymol blue		D)	Vitamin C
B) Providing oxygen to aerobically respiring structures C) Rapid utilization of ATP D) Non-synthesis of ATP  3. Agglutination reaction is strongest with the immunoglobulin A) IgM B) IgG C) IgA D) IgD  4. In the ELISA technique, the antibodies are labeled by A) Acridine orange B) Alkaline phosphate C) Neutral red D) Bromothymol blue	32.	Past	eur effect is
C) Rapid utilization of ATP D) Non-synthesis of ATP  3. Agglutination reaction is strongest with the immunoglobulin A) IgM B) IgG C) IgA D) IgD  4. In the ELISA technique, the antibodies are labeled by A) Acridine orange B) Alkaline phosphate C) Neutral red D) Bromothymol blue		A)	Change from aerobic to anaerobic
D) Non-synthesis of ATP  3. Agglutination reaction is strongest with the immunoglobulin A) IgM B) IgG C) IgA D) IgD  4. In the ELISA technique, the antibodies are labeled by A) Acridine orange B) Alkaline phosphate C) Neutral red D) Bromothymol blue		B)	Providing oxygen to aerobically respiring structures
3. Agglutination reaction is strongest with the immunoglobulin A) IgM B) IgG C) IgA D) IgD  4. In the ELISA technique, the antibodies are labeled by A) Acridine orange B) Alkaline phosphate C) Neutral red D) Bromothymol blue		C)	Rapid utilization of ATP
A) IgM B) IgG C) IgA D) IgD  4. In the ELISA technique, the antibodies are labeled by A) Acridine orange B) Alkaline phosphate C) Neutral red D) Bromothymol blue		D).	Non-synthesis of ATP
B) IgG C) IgA D) IgD  4. In the ELISA technique, the antibodies are labeled by A) Acridine orange B) Alkaline phosphate C) Neutral red D) Bromothymol blue	33.	Agg	lutination reaction is strongest with the immunoglobulin
C) IgA D) IgD  4. In the ELISA technique, the antibodies are labeled by A) Acridine orange B) Alkaline phosphate C) Neutral red D) Bromothymol blue		A)	IgM
<ul> <li>D) IgD</li> <li>4. In the ELISA technique, the antibodies are labeled by</li> <li>A) Acridine orange</li> <li>B) Alkaline phosphate</li> <li>C) Neutral red</li> <li>D) Bromothymol blue</li> </ul>		B)	IgG
<ul> <li>4. In the ELISA technique, the antibodies are labeled by</li> <li>A) Acridine orange</li> <li>B) Alkaline phosphate</li> <li>C) Neutral red</li> <li>D) Bromothymol blue</li> </ul>		C)	IgA
A) Acridine orange B) Alkaline phosphate C) Neutral red D) Bromothymol blue		D)	IgD
B) Alkaline phosphate C) Neutral red D) Bromothymol blue	34.	Inth	e ELISA technique, the antibodies are labeled by
C) Neutral red D) Bromothymol blue		A)	Acridine orange
D) Bromothymol blue		B)	Alkaline phosphate
		C)	Neutral red
		D)	Bromothymol blue
D(A)	16(A	0	(8)

29. The following organisms lack a definite cell wall

A)

B)

Mycoplasma

L-forms

lycocalyx is a surface coat on cells that  Aids the movement of red blood cells through the blood vessel  Consist of carbohydrate-protein of membrane glycolipids and glycoproteins  Facilitate the adherence of cells to each other in some tissue  All of the above				
Aids the movement of red blood cells through the blood vessel  Consist of carbohydrate-protein of membrane glycolipids and glycoproteins  Facilitate the adherence of cells to each other in some tissue				
Aids the movement of red blood cells through the blood vessel  Consist of carbohydrate-protein of membrane glycolipids and glycoproteins				
Aids the movement of red blood cells through the blood vessel				
lycocalyx is a surface coat on cells that				
Bioremediation				
Bioaugmentation				
Phytoremediation				
Biostimulation				
elease of nutrients, oxidants, or electron donors into the environment to stimulate ally occurring microorganisms to degrade or contaminated, is referred to as				
places of putrionts, ovidents, or electron descriptions				
Nucleus				
Cell membrane				
Cell wall				
Cytoplasm				
Freeze-etch particles (used in preparing the cell for electron microscopy) can be located				
Electrons				
Aluminium foils				
Superfine glass				
Magnetic coils				
electron microscope, which material is used as an objective lens?				
160° F				
165° F				
140° F				
220° F				
is the minimum temperature to which ground beef should be cooked to make sure ee from harmful bacteria?				
Whey				
Sulphite waste liquor				
Nutrient agar				
1				

- 41. Which statement best describes connective tissue? Usually contains a large amount of extracellular matrix B) Primarily concerned with secretion Always arranged in a single layer of cells C) D) Is an avascular 42. Cytokinesis is A) The passive form of transmembrane transport B) How macrophages engulf bacteria Separation of chromatid pairs during metaphase C) Division of cytoplasm during somatic cell division D) The net movement of water molecules through a selectively permeable membrane from 43. an area of higher water concentration to an area of a lower water concentration A) Reverse osmosis B) Diffusion C) Osmosis D) Active transport 44. Secretions of the merocrine gland are synthesized on A) Ribosomes B) Golgi complex C) Rough endoplasmic reticulum D) Smooth endoplasmic reticulum
  - 45. Which of the following is an avascular tissue?
    - A) Bone
    - B) Fibrocartilage
    - C) Stratified squamous epithelium
    - D) B and C
- 46. Approximately how long after fertilization does implantation of an embryo usually occurs
  - A) 3 weeks
  - B) 1 day
  - C) About 6 days
  - D) About 3 days

4/.	DIZ	ygotic (maternar) twins result from
	A)	Two secondary oocytes and two sperms
	B)	Two secondary oocytes and one sperm
	C)	One secondary oocyte and one sperm
	D)	One secondary oocyte and two sperms
48.		eries of functional changes that cause a sperm's tail to beat more vigorously and pare its plasma membrane to fuse with the oocyte's plasma membrane is called
	A)	Fertilization
	B)	Implantation
	C)	Capacitation
	D)	Syngamy
49.	J. Chi. es	gen and nutrient from the maternal blood must pass through which of the following cture before entering the fetal blood?
	A)	Umbilical vein
	B)	Umbilical artery
	C)	Decidua capsularis
	D)	Allantois
50.	Ifa	newborn baby has a low blood sugar level or a small penis, what will be the cause?
	A)	Deficiency of thyroid hormone
	B)	Deficiency of growth hormone
	C)	Increase in thyroid hormone
	D)	Increase in growth hormone
51.	Ext	acellular fluid in joint is termed as
	A)	Blood plasma
	B)	Lymph
	C)	Synovial fluid
	D)	Aqueous humor
52.		gle photon emission computed tomography (SPECT) scanning is a specified type of oactive scan is specifically used for studying
	A)	Brain, heart, liver, and lungs
	B)	Brain, heart, liver, and kidney
	C)	Brain, heart, liver, and appendix
	D)	Brain, heart, colon, and bones

53.		gitalis often is given to patients with heart failure, a condition of weakened pumping ion by the heart. Digitalis exerts its effect by
	A)	Decrease Ca2+
	B)	Increase Ca2+
	C)	Decrease Na+
	D)	Increase Na+
54.	Wh	ich of the following is a pyrimidine nucleotide?
	A)	Uracil
	B)	Cytosine
	C)	Thymine
	D)	All of the above
EE	The	
55.		number of hydrogen bonds between adenine and thymine is
	A)	
	B)	
	C)	
	D)	
56.	Wh	ich ratio is constant for DNA?
4	A)	A+G/T+C
	B)	A+T/G+C
	C)	A+C/U+G
	D)	A+U/G+C
57.	The	
37.	A)	disruption of nucleosomal structure is due to
		Acetylation Carboxylation
	B)	
	C)	Phosphorylation Mathylation
	D)	Methylation
58.	The	number of nucleotides found in a DNA segment if it contains 100 adenine and 100
		sines are
	A)	100
	B)	200
	C)	400
	D)	
16(A	)	(12)

	B)	X-ray	
	A)	Positron emission tomography (PET)	Carrie Man No.
64.		ich is the most common form of medical imaging that uses letrate skin and tissues but not bone?	nigh-energy radiation to
*	D)	Imaging	
5%	C)	Radioactivity	
	B)	Decay	A THE REST. A
	A)	Attenuation	
63.	The	gradual decrease in X-ray beam intensity as it progresses thr	ough a material is called
	D)	Validation	
	C)	Process control	
	B)	Proficiency testing	
	A)	Document control	
62.	as ir	laboratory process to provide a high degree of assurance thatended in the live environment is known as	at the process will work
	D)	Antibodies	
	C)	Storage	
	B)	Hormones	
	A)	Enzymes	
61.	Whi	ich proteins are called messenger proteins?	
	D)	Mitochondria	
	C)	Golgi bodies	
	B)	Ribosomes	
	A)	Centrosomes	
60.	The	proteins are synthesized at	
		T opina y Tutura i a company a	
XI.	D)	Peptidyl transferase	
	C)	Carbohydrate	
	B)	Peptides	
	A)	peptide bond formed by the enzymes is known as  Carbonic anhydrase	5 H = 17 H POSIDO

66.	Re	commended transport medium for stool specimen suspect	ed of Vibrio cholerae is
	A)	Buffered glycerol saline medium	
	B)	Venkatraman Ramakrishnan medium	
	C)	Nutrient agar	
	D)	Blood agar	
67.	The	e best way of sterilizing disposable plastic syringes is	
	A)	UV rays	
	B)	Gamma rays	
	(C)	Autoclave	
	D)	Hot air oven	
68.	Wh	o is the father of transfusion medicine?	
	A)	Karl Landsteiner	
	B)	William Harvey	
	C)	Liliana Marcus	
	D)	Richard Lower	
THE AND	1		
69.	Wh	en typing blood a positive reaction?	
	A)	Shows which antigen is present	
	B)	Shows clumping	
	C)	Helps deduce which blood type the sample is	
	D)	All of the above	
70.	Wh	ich is the strongest blood type?	
	A)		
	B)		
	C)	AB	
	D)	A+ve	THE REST
	1		
16(A	1)	(14)	4

65. Which diagnostic image is the result of ultrasound technology?

Positron emission tomography (PET)

A)

B) C)

D)

Echocardiogram

Angiogram

Radiogram

16( <i>A</i>	()	(15)	[P.T.O.
	D)	Femoral vein	
	C)	Basal vein	
	B)	Deep vein	
	A)	Cephalic vein	
76.	Whi	ch is the site of blood collection?	
	D)	9 Months	
	C)	12 Months	
	B)	13 Months	
	A)	10 Months	
75.	Bloc	od plasma as well as cryo are frozen and stored in freezers for up to	0
	D)	Severe bruising	
	C)	Dysentery	dia un de la companya della companya de la companya de la companya della companya
	B)	Vision deficiency	
	A)	Body pain	
74.	Pick	out the right side effect of the anticoagulant	
	D)	12.5 g/dl	
	C)-	52.7 g/dl	THE RESERVE
. 1	B)	11.3 g/dl	
	A)	28.5 g/dl	
73.	Wh	ich is the minimum haemoglobin value of the blood donor?.	
	D)	Ethanol	
	()	Phosphate	

71. How many defined blood group antigens are in the Rh blood group system consists?

A)

B)

C)

D)

A)

B)

15

65

46

49

Dihydrate

Citric acid

72. Choose the one citrate anticoagulant solution

77.	Wh	nich of the following statemen	nt is true a	bout cross-matching?
	A)	Ensure RBC		
	B)	Blood compatibility testing	g.	
	C)	Determine serum		
	D)	Finding infection		
78.	Wh	nat blood types cause coombs	?	
	A)	Rh-ve		
	B)	Rh+ve .	į.	
	C)	AB-ve		
	D)	A-ve		
79.	Hov	w long can you have packed re	ed blood c	ells?
	A)	22-47 Days		
	B)			
		20-42 Days		
	D)	21-49 Days		
80.		sh frozen plasma contains		
	A)	Serum		
	B)	Glucose		
	C)	RBC		
	D)	Fibrinogen		
01	Mot	ah aalumu Israal - I - II		
81.	Iviau	Column I	nd select t	he correct answer using answer codes
	a	Hemolysis		Column II
	b.	Agglutination	1. 2.	Destroyed RBC
	c.	Hemostasis	3.	Clot within the damaged blood vessel
	d.	Thrombosis	3. 4.	A blood clot within veins or arteries
		a b c d		Clumping of RBC
	A)	1, 4, 2, 3		
		2, 3, 4, 1		
		3, 4, 1, 2		
	D)	4, 1, 2, 3		
			14 14 14	

82.	Mat	ch column-I with column	a-II and select t	the correct answer using answer codes
		Column - I		Column - II
	a.	Introns	1.	A locus in the second chromosomes of D. melanogaster
	b.	Homeotic genes	2.	Non-coding part of the gene
	c.	Exons	3.	The coding part of the gene
	d.	Gene within gene	4.	Determine body plans
		a b c d		
	A)	3, 1, 2, 1		
		4, 1, 3, 2		
		2, 4, 3, 1		
		4, 2, 1, 3		
83.	Mat	ch column-I with column	n-II and select	the correct answer using answer codes
		Column - I		Column - II
	a.	Histamine	1.	Biological rhythms and Sleep wake cycles
	b.	Serotonin	2.	Nicotinic acid
	c.	Melatonin	3.	Neurotransmitter
A	d.	Tryptophan	4.	Stimulate gastric secretion
		a b c d		
	A)	1, 4, 2, 3		
	AL III	2, 3, 4, 1		
Ti -		3, 4, 1, 2		
	D)	4, 3, 1, 2		
84.	Mat	ch column-I with column	n-II and select	the correct answer using answer codes
		Column - I		Column - II
	a.	Zein	1.	Lack lysine
	b.	Protamines	2.	Rich in proline
	c.	Prolamines	3.	Contains a large number of arginine and lysine residues
	d.	Cereals	4.	Lacks tryptophan and lysine
		a b c d		
	A)	1, 4, 2, 3		
	B)	4, 3, 2, 1		
	C)	3, 4, 1, 2		
	D)	4, 1, 2, 3		

		Column - I			orrect answer using answer codes		
	a.	Cardiac arrhythmias	1.		art rate slower than normal		
	Ъ.	Tachycardia	2.	1	art rate faster than normal		
	c.	Bradycardia	3.		rgling sound		
	d.	Heart murmur	4.	Abnormal patterns of cardiac contraction			
		a b c d			22 Satisfaction		
13 23	A)	1, 4, 2, 3					
	B)	2, 3, 4, 1					
	C)	3, 4, 1, 2	A TO SERVICE				
	D)	4, 2, 1, 3					
86.	Match column-II with column-II and select the correct answer using answer codes						
		Column-I			Column-II		
	a.	Cortical reaction		1.	Female genital tract		
	b.	Lysosomal activity		2.	Progesterone		
	c.	Secretary phase		3.	Acrosome		
	d.	Capacitation		4.	Fertilization		
1		a b c d					
110	A)	1, 4, 2, 3					
	B)	4, 3, 2, 1	N. State Co.				
	C)	3, 4, 1, 2					
	D)	4, 1, 2, 3					
87.	Match column-II with column-II and select the correct answer using answer codes						
		Column -I			Column - II		
	a.	Neotony		1.	Armadillos		
	b.	Polyembryony		2.	Rock lizard		
	c.	Metagenesis		3.	Axolotl larvae		
	d,	Parthenogenesis		4.	Obelia		
		a b c d					
	A)	1, 4, 2, 3					
	B)	2, 3, 4, 1		Tool M			
	C)	3, 1, 4, 2					

D)

4, 1, 2, 3

88.	Match column-I with column-II and select the correct answer using answer codes						
		Column - I		Column - II			
	a.	Aldosterone	1.	Decreases plasma calcium concentration			
	b.	Adrenal medulla	2.	Increased secretion of sebaceous glands			
	c.	Calcitonin	3.	Na + and K + balance and blood pressure regulation			
	d.	Testosterone	4.	Pheochromocytoma			
		a b c d					
	A)	1, 4, 2, 3					
	1 100	2, 3, 4, 1					
	10000	3, 4, 1, 2					
	D)	4, 1, 2, 3					
89.	Match column - I with column - II and select the correct answer using answer codes						
		Column - I		Column - II			
	a.	Nucleosome	1.	Photorespiration			
	b.	Lysosome	2.	Microtubules			
	c.	Tubulin	3.	Chromatin			
	d.	Peroxisome	4.	Autolysis			
		a.bcd					
	A)	1, 4, 2, 3					
	B)	2, 3, 4, 1					
		3, 4, 2, 1					
	D)	4, 1, 2, 3					
90.	Match column-I with column-II and select the correct answer using answer codes						
		Column - I		Column - II			
	a.	Mitochondria	1.	Monoamine oxidase			
	b.	Chloroplast	2.	High concentration of cardiolipin			
	c.	Outer membrane	3.	Tend to pump H <sup>+</sup> and retain OH <sup>-</sup>			
	d.	Inner membrane of the mab c d	itochondrion 4.	Tend to pump OH <sup>-</sup> and retain H <sup>+</sup>			
	4)						
	A)	1, 4, 2, 3					
		2, 3, 4, 1					
		3, 4, 1, 2 4, 1, 2, 3					
16(4	<b>A</b> )		(19)	[P.T.O			

#### 91. Consider the following statements:

Assertion: Extracellular materials help in the separation of cells

Reason: Cell junctions are formed by extracellular materials

- A) Both the assertion and reason are true and the reason is a correct explanation of the assertion
- B) Both the assertion and reason are true but the reason is not a correct explanation of the assertion
- C) The assertion is true but the reason is false
- D) Both the assertion and reason are false

#### 92. Consider the following statements:

Assertion: Eduard A Strasburger is a famous cytologist

Reason: He related it to the discovery of cell division and used the term nucleoplasm and cytoplasm

- A) Both the assertion and reason are true and the reason is a correct explanation of the assertion
- B) Both the assertion and reason are true but the reason is not a correct explanation of the assertion
- C) The assertion is true but the reason is false
- D) Both the assertion and reason are false

#### 93. Consider the following statements:

Assertion: Vacuoles are osmoregulatory components of cell

Reason: Ions and other materials are stored in the vacuole

- A) Both the assertion and reason are true and the reason is a correct explanation of the assertion
- B) Both the assertion and reason are true but the reason is not a correct explanation of the assertion
- C) The assertion is true but the reason is false
- D) Both the assertion and reason are false

## 94. Consider the following statements:

Assertion: Histones are basic proteins

Reason: Because they have a high content of arginine and glycine which are basic amino acids

- A) Both the assertion and reason are true and the reason is a correct explanation of the assertion
- B) Both the assertion and reason are true but the reason is not a correct explanation of the assertion
- C) The assertion is true but the reason is false
- D) Both the assertion and reason are false

16(A)

#### 95. Consider the following statements:

Assertion: Thymosin is a protein

Reason: Does not prevent actin polymerization

- A) Both the assertion and reason are true and the reason is a correct explanation of the assertion
- B) Both the assertion and reason are true but the reason is not a correct explanation of the assertion
- C) The assertion is true but the reason is false
- D) Both the assertion and reason are false

#### 96. Consider the following statements:

Assertion: Lysosomal enzymes are N-linked glycosylated in the endoplasmic reticulum. Following this step, lysosomal hydrolases are then transported through the biosynthetic secretory pathway to the late endosome

**Reason:** The N-linked oligosaccharide is further modified in the Golgi stacks by the addition or removal of sugars.

- A) Both the assertion and reason are true and the reason is a correct explanation of the assertion
- B) Both the assertion and reason are true but the reason is not a correct explanation of the assertion
- C) The assertion is true but the reason is false
- D) Both the assertion and reason are false

#### 97. Consider the following statements:

Assertion: Acetyl Co A is the center of lipid metabolism

Reason: It can be converted to fatty acids which in turn give rise to prostaglandins

- A) Both the assertion and reason are true and the reason is a correct explanation of the assertion
- B) Both the assertion and reason are true but the reason is not a correct explanation of the assertion
- C) The assertion is true but the reason is false
- D) Both the assertion and reason are false

## 98. Consider the following statements:

Assertion: Membrane lipid molecules assemble spontaneously and form a closed spherical structure

Reason: When placed in water

- A) Both the assertion and reason are true and the reason is a correct explanation of the assertion
- B) Both the assertion and reason are true but the reason is not a correct explanation of the assertion
- C) The assertion is true but the reason is false
- D) Both the assertion and reason are false

#### 99. Consider the following statements:

Assertion: PCR is best method for checking mycoplasma contamination in a mammalian cell line

**Reason:** PCR test is highly specific, It is based on the detection of 16S rRNA molecule most common species of mycoplasma contaminating cell culture

- A) Both the assertion and reason are true and the reason is a correct explanation of the assertion
- B) Both the assertion and reason are true but the reason is not a correct explanation of the assertion
- C) The assertion is true but the reason is false
- D) Both the assertion and reason are false

#### 100. Consider the following statements:

Assertion: All digestible monosaccharides, disaccharides, and polysaccharides must be converted into glucose by the various liver enzymes

**Reason:** Because glucose is the only sugar used by the various body tissues for the requirement of energy

- Both the assertion and reason are true and the reason is a correct explanation of the assertion
- B) Both the assertion and reason are true but the reason is not a correct explanation of the assertion
- C) The assertion is true but the reason is false
- D) Both the assertion and reason are false
